

The Advent CAT Sensor Chip

This is the original CAT Temp Sensor Chip that everyone uses. It is made by Advent Ignitions.

When removing the Catalytic converter on the Yamaha GP1200R or GP1300R engines, the cat temperature sensor no longer works properly and the OEM ignition will sound the alarm and shut the engine down. By removing the cat temperature sensor and installing the Advent cat sensor chip the OEM ignition will be restored to proper operation and performance.

The Advent cat sensor is a direct plug-in replacement for the stock cat temperature sensor.
