

Kawasaki T3 Remote Switch (curve selector)

This handy device allows you to select 1 of 4 curves in your SXR ignition while it is sealed electrical box or simply need easier access for quick timing curve selection.

The remote switch is an ideal add-on to your T3 2-cylinder ignition. The T3 ignition has four built-in advance curves that are switch selectable on the ignition. However, when the ignition is secured inside the sealed electrical box it requires quite a bit of time and effort to get to the switches to select a new curve.

The Advent Remote switch assembly extends the curve selection switches to a more convenient location away from the ignition module. This make changing curves a snap. It provides the ability to select a curve for recreational riding, another for racing and possibility another when you are on the river and all you can get is 85 octane fuel.

The Remote switch device fits fits the 2-coil T3 ignition module.
